Potato Figures.

The estimated yield of potatoes in the United States this year is 244,445,-000 bushels, about three bushels per capita of our population. The average yield per acre was 81 bushels, which is considerably above the average of the last 20 years.' In fact the largest reported average yield was 93 bushele in 1891; the next largest, 90 bushels, last year. The lowest average of record was 53 bushels, and there have been many years when the yield was between that number and 75 bushels. The largest total yield was last y ar, 271,777,000 bushels, or nearly 27,000,-000 bushels more than this year. It s not easy to see how potatoes can be very cheap this year, and it looks as if healthy potatoes, well stored, STONE'S would pay a fair interest if kept for later markets. But the factor of ret must be considered in the proposition, and that may easily make early marketing desirable.

flow of nutritive secretions.

"I can cheerfully recommend Dr. Pierce's Pavorite Prescription as one of the best medicines for women," writes Mra. Mary Murdock, Murdock, of tags Woodard Are, Topeka, Kan. "I sider it the best medicine made. I know it has no equal. I am the mother of ten children and only one living—the tenth one. She is one year old and is as well and hearty, as can be. She is a beauty. Of my other babies, one lived to be one year old, but she was always feeble. I tried different doctors, but none of them could tell me what my trouble was. They said I was well and strong. I was examined by surgeons but they found nothing wrong, and they were puzzled to know what my trouble was. I did not know what to do, so I thought this time I would try Dr. Pierce's Favorite Prescription. I took it the entire nine months and now have a fine baby girl, and I cannot praise your medicine enough for the good it did me."
